Art Unit: 1652

DETAILED ACTION

This application is a continuation in part of 09/571,553.

Claims 1-82 are pending.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a method of producing DNA encoding galactose oxidase, classified in class 435, subclass 252.3.
- II. Claims 19-62, drawn to DNA encoding galactose oxidase, classified in class 536, subclass 23.2.
- III. Claims 63-82, drawn to galactose oxidase, classified in class 435, subclass 190.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the DNA of Invention II can be chemically synthesized.

Inventions II and III are patentably distinct because a protein and a DNA are different compounds, each with its own chemical structure and function, and they have different utilities. The DNA molecule of inventions II is not limited in use to the

Application/Control Number: 09/722,602

Art Unit: 1652

production of polypeptide of invention III and can be used as a hybridization probe, and the protein of invention III can be obtained by a materially different method such as by biochemical purification.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: multiple mutant galactose oxidases and DNA encoding mutant galactose oxidases comprising different substitutions having different effects and utilities.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 20-69 drawn to mutant DNA encoding galactose oxidase and claims 70-89 drawn to mutant galactose oxidase are generic. Galactose oxidases and DNA encoding galactose oxidases having different substitution(s) are patentably distinct species of the claimed invention. Applicants are required to elect one galactose oxidase mutant species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Application/Control Number: 09/722,602

Art Unit: 1652

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Mr. Felner on August 17, 2001 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Application/Control Number: 09/722,602 Page 5 Art Unit: 1652 Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yong Pak whose telephone number is 703-308-9363. The examiner can normally be reached on Monday through Friday from 8:30 a.m. to 5:00 p.m. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Ponnathapura Achutamurthy, can be reached on (703) 308-3804. The fax phone number for the organization where this application or proceeding is assigned is 703-746-3173. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196. Yong Pak Patent Examiner
